

STATEMENT

I acknowledge that for breastfeeding counseling it can be necessary to examine the mother's breast and visual inspection and manual examination of the baby's mouth. I give permission to the breastfeeding consultant for this. Questions asked by a breastfeeding counselor about your own and your baby's health apply, I will answer to the best of my knowledge.

The lactation consultant helps with breastfeeding and, if necessary, expressing milk, shows alternative feeding methods and the use of breastfeeding aids. If necessary, he will also contact the family's pediatrician and nurse in person and / or other professionals, leaving them with written notice in all cases. Written summary of the visit is emailed after the consultation, this contains a summary of the situation and professional suggestions.

I undertake to show this notice to the professionals mentioned above. I acknowledge that a lactation consultant does not provide medical advice on breastfeeding counseling is not a substitute for a medical examination.

The mother's right to make an informed decision about her child, however, for problems arising from non-compliance with the recommendations of a breastfeeding consultant assumes no responsibility.

After the personal meeting, it is possible to make an appointment by phone, e-mail if I feel the need, I live with it
